

miró manufactura de café

Coffee Station

Coffee Station

Capacity Output
1 Barista serves in 8 hours approx. 300 – 350 coffee drinks.

Extension
The coffee station can be upgraded with additional machines or several individual stations in order to best serve your event setup and needed capacity.

Space The set-up needs a minimum of 2x2m + some storage

Electricity Plug 1 230V; Stecker Typ J
Plug 2 380V, 16A; Plug Type CEE16
Plug 3 Typ 15, 400V, 10A

Placement Indoor. Depending on the weather conditions or roof availability, outdoors could be possible. In that case we do suggest considering the truck option if there is enough space.

Water We do have tanks. But accessibility to tap water to refill the tanks is welcomed.

Requirements Depending on the event, we require at least 1 to 2 hours prior to the start for setup, and approx. the same amount of time afterward for dismantling. Therefore, we would need access to the event venue before the event begins, in accordance with this timeframe.
